SUMMARY

AI Engineer and product builder who ships end-to-end automation and LLM-powered systems. At Collegedunia, built an internal platform that cut landing page creation time by 80%+ and automated Google/Microsoft Ads campaign setup via API, saving 2+ hours of daily manual work. At Lawxygen, engineered a RAG pipeline over 300,000+ legal PDFs using Claude LLM, semantic embeddings, and vector search. Owns the full delivery cycle: problem definition, system architecture, and outcome measurement.

EDUCATION

Manipal University Jaipur 2021 – 2025
B.Tech – CSE (Hons.) IoT and Intelligence

EXPERIENCE

Collegedunia.com | Trainee | Full-time | Gurugram Jan 2026 – Present

- Built an internal Landing Page Generator platform that enabled marketing teams to create and publish exam-specific landing pages from reusable templates in under 5 minutes, reducing manual page creation effort by 80%+.
- Built a centralized admin dashboard for landing page management, including create, edit, clone, delete, event tracking, exam mapping, settings management, and performance monitoring workflows.
- Automated Google Ads and Microsoft Ads copy produces RSA-compliant headlines and descriptions from exam metadata, exported as bulk-upload CSVs, saving 2–3 hours per campaign cycle.
- Architected an N8N pipeline to create PAUSED campaigns via Google Ads API with a human-audit checkpoint before go-live, cutting campaign setup time by ~70%.
- Built a Claude LLM-powered campaign automation engine and integrated IP geolocation on landing pages; automated 2+ hours of daily reporting and eliminated the location input step, reducing user drop-off.

Lawxygen AI | AI Developer | Remote Nov 2025 – Jan 2026

- Scraped and structured 300K+ court judgment PDFs; designed a RAG pipeline (semantic chunking → embeddings → vector search) for sub-second case-law retrieval.
- Integrated Claude LLM for grounded legal reasoning and AI-assisted drafting; reduced hallucination via prompt engineering, citation enforcement, and top-k tuning.
- Structured metadata (court, year, case type) for filtered retrieval; built scalable scraping with rate-limiting and deduplication.

Business Analytics Intern | Växa House LLP | Jaipur Sept 2025 – Nov 2025

- Built Power BI dashboards and performed EDA to surface performance trends and deliver actionable insights for stakeholders.

Delhi Metro Rail Corporation (DMRC) | ED/IT Intern | New Delhi, India June 2024 – Aug 2024

- Built real-time Apache log analytics dashboards (Python / Power BI / Dash), reducing resource utilisation by 20%; developed heuristic security alert system.

PROJECTS

AI-Native Conversational Portfolio | Live | GitHub

- Engineered an interactive portfolio with a conversational UI, leveraging Mistral AI and the Vercel AI SDK to provide dynamic, context-aware responses to user queries.
- Implemented an AI agent with tool-calling capabilities, allowing the application to render rich React components (like project carousels and skills lists) directly within the chat interface.
- Built a responsive and visually appealing frontend using Tailwind CSS and Framer Motion, deployed on Vercel with a full CI/CD pipeline for automated builds and hosting.

Tech Stack: Next.js, TypeScript, Mistral AI, Vercel AI SDK, Tailwind CSS, Framer Motion

SKILLS

Languages	Python
Web Technologies	HTML, CSS
Data Analysis and Visualization	Power BI, Excel
Data Base Management Systems	MySQL, MongoDB
AI & ML	OpenAI API, Embeddings, Gen AI, Agentic AI, Claude, RAG Pipelines, Prompt Engineering
Automation	N8N, Google Ads API, Microsoft Ads API, Agentic Workflows, Data Pipelines
Tools & Frameworks	Streamlit, GitHub, Microsoft Power Platform (Power Apps, Power Automate, Copilot Studio)

CERTIFICATIONS

- Microsoft Certified: Introduction to Gen AI
- Microsoft Certified: Power Platform Fundamentals (PL-900)
